

# FINE PARTICLE STRAINER

Removes **99%** of all food particles and prevents blockages

## Tiny yet Troublesome

Fine particles from coffee grounds, tea leaves, plaster from dental products, arts and crafts classes, ingredients used for baking, plate leftovers like rice, peas, corn etc. get washed down the drains. Even with regular sink strainers, these fine particles pass through and stick to the drainpipes. This leads to blockages and foul odours, creating breeding grounds for insects and vermin, which ends up in costly repairs and maintenance.

## A Fine Solution

The Fine Particle Strainer (FPS) is a high quality, but low-cost and low maintenance solution that removes 99% of the food or organic debris from sinks. This stops unwanted material from going down the drain and prevents blockages, corrosion and foul odours. Your expenditure on repairs is automatically reduced which keeps both customers and employees happy.

## How It Works

Free-standing or wall-mounted, the FPS has four variable positions for wastewater inlet and outlet connections. Measuring less than 1 foot in height, the FPS unit fits anywhere between the sink & floor drain.

When wastewater passes through, the expandable and porous micro-filter immediately captures even the finest of particles. This ensures that only clarified water goes into your drainage system, keeping it free of all buildups and blockages. The micro-filter can be easily removed and replaced every day, and the debris can be disposed off in the garbage.

## Benefits

- Permanent and low-cost solution
- Improves equipment performance
- Reduces blockages and corrosion
- Stops foul odours
- Reduces BOD and TSS levels\*
- Easy to replace filters

\* Biological Oxygen Demand and Total Suspended Solids

## Most Useful for:

**Coffee shops • Restaurants • Hotels  
Delicatessens • Bakeries  
Supermarkets with meat and fish  
counters • Dental Clinics • Day Care  
Activity Centers • Arts & Crafts  
Workshops**

Height 10.5" x Width 13.2" x Depth 8.8"

Supplied with legs and coupling plus 30-day supply of micro-filters
