

GES® Plus

Chemical-free Biological Action

Free your drains at home, the natural way!

Why Drains Get Blocked

Oils, fats and grease (OFGs) from the utensils in your kitchen sinks find their way into the drain line. Vast quantities of soap residue, shampoo, and detergents flow into the bathroom drain everyday. Since OFGs float on water, they gather on the roofs and walls of drainpipes and lead to drain blockages, foul smells and septic tank failure.

Mechanical cleaning, harsh chemicals and acids end up corroding the pipelines and only make the problem worse.

Environment-friendly Home Solution

GES® Plus is a cost-effective, environment- friendly product that can get rid of grease blockages quickly and permanently.

Our state-of-the-art technology harnesses the power of nature in which specifically developed beneficial micro-organisms are introduced into the drains. They are live and highly active microbes that get to work as soon as they enter the drainage system.

How does Bioremediation work?

Bioremediation is a natural process in which high-count colonies of microbes consume the OFGs present in the drain lines, septic tanks and sewers. Most importantly, the microbes turn the waste OFGs into harmless carbon dioxide and water. When collected, this water can also be reused for flushing and gardening.

Benefits

- Cost-effective • Reduces messy blockages
- No more plumbers • Removes odours instantly
- Environment-friendly • 100% chemical-free & safe

Key Features

GES® Plus contains a powerful deodoriser that eliminates rancid odours leaving your drains smelling fresh and clean.

The beneficial micro-organisms used in GES® Plus are non-toxic and non-pathogenic, i.e. do not carry any diseases. It is 100% safe to use.

How to use GES® Plus

The GES® Plus is simple to use with the micro-drip system that is designed to meter and deliver a precise high concentration of micro-organisms into the drain line.

You can install the compact, wall-mounted system next to the kitchen sink. The system contains a dispenser that is refilled every 14 or 30 days depending on the severity of the blockage.

Or you can pour one capful of GES® Plus into each drain, every week to keep the drains free flowing.

Most useful for: kitchen sinks, wash basins and shower drains.
