

# Flow Fresh™ System

Urinal Treatment Solution

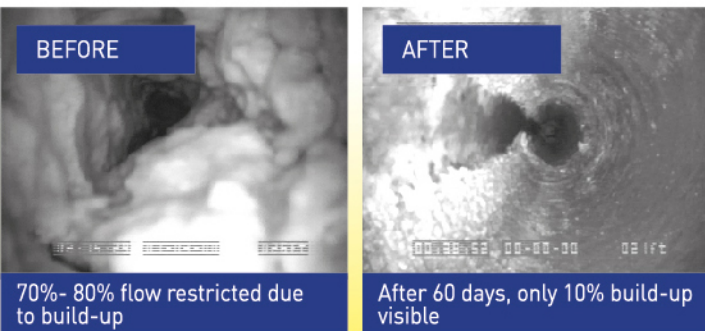

## The Problem

Uric crystal build-up in urinals and drain lines causes blockages and foul odours. In most cases, the build-up causes 80 to 90% blockage inside the pipes. The repeated use of urinals without flushing worsens the odours.

## Flow Fresh™ - Dispensing System

Dispensed using a wall-mounted, automatic drip system, Flow Fresh™ softens and washes off mineral deposits formed on porcelain surfaces and deodorises at the same time. It removes uric crystals from the drain lines, therefore preventing blockages, backups and smells.

## Benefits of Dispensing System

- Cost-effective
- Non-corrosive and safe to use
- Eliminates need for de-scaling
- Keeps smells down
- Easy to install & maintain
- Refill containers for repeat use

**Product Useful for: Airports • Bus Terminals • Clubs & Gymnasiums • Cinemas  
Educational Institutes • Hotels • Offices • Railway Stations • Restaurants • Hospitals • Malls**

## Urinal Screen

Place this device in urinals for constant freshness and clean drains. Used along with the micro-drip system or independently, this screen contains Flow Fresh™. It prevents solid build-ups, fights unpleasant odours and attacks urine on contact. The screen can be replaced every 2 to 4 weeks, depending on usage.
